Low-voltage switchgear and controlgear - Part 2: Circuit-breakers

Tested by (name + signature).....:

Kevin Huang

Approved by (name + signature).....:

Linda lin

Date of issue...... Dec. 28, 2018

Testing Laboratory Name...... Shanghai Global Testing Services Co. L

Address: Floor 2nd, Building D-1, No. 128, Shenfu Road, Minhang

District, Shanghai, China.

Applicant's name...... Zhejiang Changcheng Trading Co., Ltd.

Address: No.2-1, Baixiang Road, Beibaixiang, Yueqing, Zhejiang

Manufacturer's nameSame as applicantAddress:Same as applicant

Factory's name..... Same as applicant

Address: Same as applicant

Test specification:

Standard..... EN 60947-2:2006+A2:2013

Test Report Form No..... EN 60947-2C

Test item description...... Moulded Case Circuit Breaker

Trade Mark...... /

Possible test case verdicts:

Testing.....

Date(s) of performance of tests...... Dec. 13, 2018 to Dec. 28, 2018

General remarks:

The test results presented in this report relate only to the object tested.

This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.

"(See Enclosure #)" refers to additional information appended to the report.

"(See appended table)" refers to a table appended to the report.

Throughout this report a comma (point) is used as the decimal separator.

This test report includes

Annex I: Photo Documentation, 1 page(s)

General product information:

Copy of marking:

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
5.2	MARKING		-
a)	The following data shall be marked on the circuit-breaker itself or on a name plate or nameplates attached to the circuit-breaker, and located in a place such that they are visible and legible when the circuit-breaker is installed.		-
	-rated current:	In = 100A	Р
	-suitability for isolation, if applicable, with the symbol		Р
	- indication of the open and closed position: with O and I respectively, if symbols are used		-
b)	Marking on equipment not needed to be visible after mounting:		Р
	- manufacturer's name or trademark	1	Р
	- type designation or serial number	YCM7	Р
	- IEC 60947-2 if the manufacturer claims compliance with this standard.	IEC / EN 60947-2	Р
	- utilization category	Α	Р
	- rated operational voltage(s) Ue	1	Р
	- Circuit-breaker for use in IT systems: Circuit-breaker for which all values of rated voltage have not been tested according to annex H or are not covered by such testing, shall be identified by the symbol which shall be marked on the circuit-breaker immediately following these values of rated voltage		Р
	- value (or range) of the rated frequency and/or the indication DC (or symbol)	50Hz	Р
	- rated service short-circuit breaking capacity. Ics		Р
	- rated ultimate short-circuit breaking capacity. Icu		Р
	- rated short-time withstand current, (lcw) and associated short-time delay, for utilization category B		N/A
	- line and load terminals, unless their connection is immaterial	LINE / LOAD marked	Р

	EN 60947-2		
Clause	Requirement - Test	Result - Remark	Verdict
	- neutral pole terminals, if applicable, by the letter N	N marked	Р
	- protective earth terminal, where applicable, by the		N/A
	symbol acc. 7.1.9.3 of part 1		
	- ref. temperature for non-compensated thermal	+40 °C	Р
	releases, if different from 30°C		
c)	Marked on the circuit-breaker as specified in item		-
	b), or shall be made available in the manufacturer's		
	published information:		
	- rated short-circuit making capacity (Icm) (if higher	Equal to specified in	N/A
	than specified in 4.3.5.1)	4.3.5.1	
	- rated insulation voltage. (Ui) if higher than the		Р
	maximum rated operational voltage)		
	- rated impulse withstand voltage (Uimp), when		Р
	declared.		
	- pollution degree if other than 3	Pollution degree 3	N/A
	- conventional enclosed thermal current (Ithe) if		N/A
	different from the rated current:		
	- IP Code, where applicable:		N/A
	- minimum enclosure size and ventilation data (if		N/A
	any) to which marked ratings apply:		
	- details of minimum distance between		Р
	circuit-breaker and earthed metal parts for		
	circuit-breaker intended for use without enclosure:		
	- r.m.s sensing if applicable, according to F.4.1.1		N/A
	- suitability for environment A or B	A and B	Р
d)	The following data concerning the opening and		-
	closing devices of the circuit-breaker shall be		
	placed either on their own nameplates or on the		
	nameplate of the circuit-breaker:		
	- rated control circuit voltage of the closing device,		N/A
	and rated frequency for AC:		
	- rated control circuit voltage of the shunt release		N/A
	and/or of the under-voltage release, and rated		
	frequency:		
	- rated current of indirect over-current releases:		N/A
	- number and type of auxiliary contacts and kind of		N/A
	current, rated frequency (if AC) and rated voltages		
	of the auxiliary switches, if different from those of		
	the main circuit.		
e)	Terminal shall be clearly and permanently		-
	identified in acc. with IEC 60445 and annex L		
			-

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
	- line terminal	LINE marked	Р
	- load terminal	LOAD marked	Р
	- neutral pole terminal "N"	N marked	Р
	- protective earth terminal		N/A
	- terminal of coils (A/B)		N/A
	- terminal of shunt release (B)		N/A
	- terminals of under-voltage release (D)		N/A
	- terminals of interlocking electromagnets (E)		N/A
	- terminals of indicated light devices (X)		N/A
	- terminals of contact elements for switching		N/A
	devices (no)		
7.1	CONSTRUCTION		
7.1.1	Withdrawable circuit-breaker		N/A
	In the disconnected position (main- and auxiliary		14/7 (
	circuits)		
	Isolating distances for circuit-breaker suitable for		N/A
	isolating warranted:		
	Mechanism fitted with a reliable indicating device		N/A
	with indicates the position of the isolating contacts.		
	Mechanism fitted with interlocks which only permit		N/A
	the isolating contacts to be separate or re-closed		
	when main contacts are open		
	Mechanism fitted with interlock, which only permit		N/A
	the main contacts to be closed when the isolating		
	contacts are fully closed.		
	Mechanism fitted with interlock, which only permit		N/A
	the main contacts to be closed when in		
	disconnected position.		
	The isolating distances between the isolating		N/A
	contacts cannot be inadvertently reduced.

	- measured creepage distances (mm)	See table 6	Р
7.1.5			
part 1	Actuator		-
7.1.5.1			
part 1	Insulation		-
	The actuator of the equipment shall be insulated		Р
	from the live parts for the rated insulation voltage		
	and, if applicable, the rated impulse withstand		
	voltage		
	If it is made of metal, it shall be capable of being		N/A
	satisfactorily connected to a protective conductor		
	unless it is provided with additional reliable		
	insulation		
	If it is made of or covered by insulating material,		
	any internal metal part, which might become		
	accessible in the event of insulation failure, shall		Р
	also be insulated from live parts for the rated		
7.1.5.2	insulation voltage Direction of movement		
7.1.5.2	The direction of operation for actuators of devices		N/A
	shall normally conform to IEC 60447.		IN/A
	Where devices cannot conform to these		Р
	requirements, e.g. due to special applications or		'
	alternative mounting positions, they shall be clearly		
	marked such that there is no doubt as to the "I"		
	and "O" positions and the direction of operation		
7.1.6			-
part 1	Indication of contact position		
7.1.6.1	Indicating means		-

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
part 1			
•	When an equipment is provided with means for		N/A
	indicating the closed and open positions, these		
	positions shall be unambiguous and clearly		
	indicated		
	This is done by means of a position indicating		N/A
	device (see 2.3.18)		
	If symbols are used, they shall indicate the closed		-
	and open position respectively, in accordance with		
	IEC 60417-2:		
	- 60417-2-IEC-5007 I On (power)		Р
	- 60417-2-IEC-5007 O Off (power)		Р
	For equipment operated by means of two		N/A
	push-buttons, only the push-button designated for		
	the opening operation shall be red or marked with		
	the symbol "O"		
	Red colour shall not be used for any other		
	push-button		Р
	The colours of other push-buttons, illuminated		N/A
	push-buttons and indicator lights shall be in		
	accordance with IEC 60073		
7.1.6.2	Indication by the actuator		-
part 1			
	When the actuator is used to indicate the position		Р
	of the contacts, it shall automatically take up or		
	stay, when released, in the position corresponding		
	to that of the moving contacts; in this case, the		
	actuator shall have two distinct rest positions		
	corresponding to those of the moving contacts, but		
	for automatic opening a third distinct position of the		
	actuator may be provided		
7.1.7	Additional safety requirements for equipment		-
7.1.7	suitable for isolation		
7.1.7.1	Additional constructional requirements for		-
	equipment suitable for isolation (Ue > 50 V):		
	Equipment suitable for isolation shall provide in the		-
	open position an isolation distance in acc. with the		
	requirements necessary to satisfy the isolating		
	function. Indication of the main contacts shall be		
	provide by one or more of the following means:		
	- the position of the actuator		Р
	- a separate mechanical indicator		N/A

	EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict	
	- visibility of the moving contacts		N/A	
	When means are provided or to lock the equipment		N/A	
	in the open position, locking only be possible when			
	contacts are in the open position			
	Actuator front-plate fitted to the equipment in a		Р	
	manner which ensures correct contact position			
	indication and locking			
	The indicated open position is the only position in		Р	
	which the specified isolation distances between the			
	contacts is ensured.			
	- minimum clearances across open contacts (see	5,5 mm	-	
	Table XIII, Part 1) (mm) :			
	- measured clearances (mm) :	23,0 mm	Р	
	- test Uimp across gap (kV) :	6 kV	Р	
7.1.7.2	Supplementary requirements for equipment with			
	provision for electrical interlocking with contactors			
	or circuit-breakers:			
	auxiliary switch shall be rated according to IEC 60		N/A	
	947-5-1			
	If equipment suitable for isolation is provided with		N/A	
	an auxiliary switch for the purpose of electrical			
	interlocking with contactor (s) or circuit-breaker(s)			
	and intended to be used in motor circuits, the			
	following requirements shall apply unless the			
	equipment is rated for AC-23 utilization category			
	The time interval between the opening of the		N/A	
	contacts of the auxiliary switch and the contacts of			
	the main poles shall be sufficient to ensure that the			
	associated contactor or circuit-breaker interrupts			
	the current before the main poles of the equipment			
	open			
	Unless otherwise stated in the manufacturer's		N/A	
	technical literature, the time interval shall be not			
	less than 20 ms when the equipment is operated			
	according to the manufacturer instructions			
	Compliance shall be verified by measuring the time		N/A	
	interval between the instant of opening of the			
	auxiliary switch and the instant of opening of the			
	main poles under no-load conditions when the			
	equipment is operated according to the			
	manufacturer's instructions			
	During the closing operation the contacts of the		N/A	

	EN 60947-2		
Clause	Requirement - Test	Result - Remark	Verdict
	auxiliary switch shall close after or simultaneously		
	with the contacts of the main poles		
	A suitable opening time interval may also be		N/A
	provided by an intermediate position (between the		
	ON and OFF position) at which the interlocking		
	contact(s) is (are) open and the main poles remain		
	closed		
7.1.7.3	Supplementary requirements for equipment		-
	provided with means for padlocking the open		
	position:		
	the locking means shall be designed in such a way		N/A
	that it cannot be removed with the appropriate		
	padlock(s) installed		
	Alternatively, the design may provide padlockable		N/A
	means to prevent access to the actuator		
	test force F applied to the actuator in an attempt to		N/A
	operate to the closed position (N):		
	rated impulse withstand voltage (kV):		N/A
	test Uimp on open main contacts at the test force		N/A
		L	
7.1.8	Terminals		-
7.1.8.1	All parts of terminals which maintain contact and		Р
	carry current shall be of metal having adequate		
	mechanical strength		
	Terminal connections shall be such that necessary		Р
<u> </u>	contact pressure is maintained		
	Terminals shall be so constructed that the		Р
	conductor is clamped between suitable surfaces		
	without damage to the conductor and terminal		
	Terminal shall not allow the conductor to be		Р
	displaced or to be displaced themselves in a		
	manner detrimental to the operator of equipment		
	and the insulation voltage shall not be reduced		
	below the rated value		
7.1.8.2	Connection capacity		-
	type of conductors :	Prepared conductors	Р
		(cable with lug)	
	minimum cross-sectional area of conductor (mm²):	35 mm ²	Р
	maximum cross-sectional area of conductor	120 mm ²	Р
	(mm²) :		
_ 	number of conductors simultaneously connectable	1	Р
	to the terminal :		

יייוניו ו	Description of Test	Result - Remark	Verdict
Clause	Requirement - Test	Result - Remark	verdict
7.1.8.3	Connection		
	terminals for connection to external conductors		Р
	shall be readily accessible during installation		
	clamping screws and nuts shall not serve to fix any		Р
	other component		
7.1.8.4	Terminal identification and marking		
	terminal intended exclusively for the neutral		Р
	conductor		ľ
	protective earth terminal		N/A
	other terminals		N/A
7.1.9	Additional requirements for equipment provided		
part 1	with a neutral pole		
	When equipment is provided with a pole intended		Р
	only for connecting the neutral, this pole shall be		
	clearly identified to that effect by the letter N (see		
	7.1.7.4.).		
	A switched neutral pole shall break not before and		Р
	shall make not after the other poles		
	For equipment having a value of conventional		N/A
	thermal current (free air or enclosed, see 4.3.2.1		
	and 4.3.2.2) not exceeding 63 A, this value shall be		
	identical for all poles		_
	For higher conventional thermal current values, the	100% of In	Р
	neutral pole may have a value of conventional		
	thermal current different from that of the other		
	poles, but not less than half that value or 63 A,		
	whichever is the higher		
	if a pole with an appropriate making and breaking		Р
	capacity is used as a neutral pole, then all poles,		
	incl. the neutral pole, shall operate substantially		İ
	together.		

7.1.10	Provisions for protective earthing	-
7.1.10.1	The exposed conductive parts (e.g. chassis,	N/A
	framework and fixed parts of metal enclosures)	
	other than those which cannot constitute a danger	
	shall be electrically interconnected and connected	
	to a protective earth terminal for connection to an	
	earth electrode or to an external protective	
	conductor	
part 1	This requirement can be met by the normal	N/A
	structural parts providing adequate electrical	

	EN 60947-2		
Clause	Requirement - Test	Result - Remark	Verdict
	continuity and applies whether the equipment is		
	used on its own or incorporated in an assembly		
	Exposed conductive parts are considered not to		N/A
	constitute a danger if they cannot be touched on		
	large areas or grasped with the hand or if they are		
	of small size (approximately 50 mm x 50 mm) or		
	are so located as to exclude any contact with live		
	parts		
7.1.10.2	Protective earth terminal		-
part 1			
	The protective earth terminal shall be readily		N/A
	accessible and so placed that the connection of the		
	equipment to the earth electrode or to the		
	protective conductor is maintained when the cover		
	or any other removable part is removed		
	The protective earth terminal shall be suitably		N/A
	protected against corrosion		
	In the case of equipment with conductive		N/A
	structures, enclosures, etc., means shall be		
	provided, if necessary, to ensure electrical		
	continuity between the exposed conductive parts		
	the equipment and the metal sheathing of		
	connecting conductors		
	The protective earth terminal shall have no other		N/A
	function, except when it is intended to be		
	connected to a PEN conductor (see 2.1.1.5 –		
	Note). In this case, it shall also have the function of		
	a neutral terminal in addition to meeting the		
	requirements applicable to the protective earth		
	terminal		
7.1.10.3	Protective earth terminal marking and identification		-
	The protective earth terminal shall be clearly and		N/A
	permanently identified by its marking		
	The identification shall be achieved by colour		N/A
	(green-yellow mark) or by the notation PE, or PEN,		
	as applicable, in accordance with IEC 60445,		
	subclause 5.3, or, in the case of PEN, by a		
	graphical symbol for use on equipment		
	Graphical symbol to be used:		N/A
	60417-2-IEC-5019 Protective earth (ground)		
	in accordance with IEC 60417-2		
		1	

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
7.1.11	Enclosure for equipment		-
7.1.11.1	Design		-
	The enclosure, when it is opened: all parts		N/A
	requiring access for installation and maintenance		
	are readily accessible		
	Sufficient space shall be provided inside the		N 1/A
	enclosure		N/A
	The fixed parts of a metal enclosure shall be		N/A
	electrically connected to the other exposed		
	conductive parts of the equipment and connected		
	to a terminal which enables them to be earthed or		
	connected to a protective conductor		
	Under no circumstances shall a removable metal		N/A
	part of the enclosure be insulated from the part		
	carrying the earth terminal when the removable		
	part is in place		
	The removable parts of the enclosure shall be		N/A
	firmly secured to the fixed parts by a device such		
	that they cannot be accidentally loosened or		
	detached owing to the effects of operation of the		
	equipment or vibrations		
	When an enclosure is so designed as to allow the		N/A
	covers to be opened without the use of tools,		
	means shall be provided to prevent loss of the		
	fastening devices		
	If the enclosure is used for mounting push-buttons,		N/A
	it shall not be possible to remove the buttons from		
	the outside of the enclosure		
7.1.11.2	Insulation		-
	If, in order to prevent accidental contact between a		N/A
	metallic enclosure and live parts, the enclosure is		
	partly or completely lined with insulating material,		
	then this lining shall be securely fixed to the		
	enclosure		
7.1.12	Degree of protection of enclosed equipment		-
	Degree of protection.		_
	Test for first characteristic.		
	Test for first numeral:		N/A
	Test for second characteristic		-
	Test for second numeral:		N/A
7.1.13	Conduit pull-out, torque and bending with metallic		-
part 1	conduits		_

	EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict	
	Polymeric enclosures of equipment, whether integral or not, provided with threaded conduit entries, intended for the connection of extra heavy duty, rigid threaded metal conduits complying with IEC 60981, shall withstand the stresses occurring during its installation such as pull-out, torque, bending		N/A	
7.0	Desferred and an existence of a		<u> </u>	
7.2	Performance requirements		-	
7.2.1	Operating condition		-	
7.2.1.1	Closing		-	
	For a circuit-breaker to be closed safely on to the making current corresponding to its rated short-circuit making capacity, it is essential that it should be operated with the same speed and the same firmness as during the type test for proving the short-circuit making capacity		P	
7.2.1.1.1	Dependent manual closing			
	For a circuit-breaker having a dependent manual closing mechanism, it is not possible to assign a short-circuit making capacity rating irrespective of the conditions of mechanical operation		N/A	
	Such a circuit-breaker should not be used in circuits having a prospective peak making current exceeding 10 kA		N/A	
	However, this does not apply in the case of a circuit-breaker having a dependent manual closing mechanism and incorporating an integral fast-acting opening release which causes the circuit-breaker to break safely, irrespective of the speed and firmness with which it is closed on to prospective peak currents exceeding 10 kA; in this case, a rated short-circuit making capacity can be assigned		N/A	
7.2.1.1.2	Independent manual closing		-	
	A circuit-breaker having an independent manual closing mechanism can be assigned a short-circuit making capacity rating irrespective of the conditions of mechanical operation		Р	
7.2.1.1.3	Dependent power closing		-	
	At 110% of the rated control supply voltage, the closing operation performed on no-load shall not		N/A	

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
	cause any damage to the circuit-breaker.		
	At 85% of the rated control supply voltage, the		N/A
	closing operation shall be performed when the		
	current established by the circuit-breaker is equal		
	to its rated making capacity within the limits		
	allowed by the operation of its relays or releases		
	and, if a maximum time is stated for the closing		
	operation, in a time not exceeding this maximum		
	time limit.		
7.2.1.1.4	Independent power closing		_
	A circuit-breaker having an independent power		N/A
	closing operation can be assigned a rated		
	short-circuit making capacity irrespective of the		
	conditions of power closing		
	Means for charging the operating mechanism, as		N/A
	well as the closing control components, shall be		1 07 1
	capable of operating in accordance with the		
	manufacturer's specification		
7.2.1.1.5	Stored energy closing		_
	Capable ensuring closing of the circuit-breaker in		N/A
	any condition between no-load and its rated		14//
	making capacity		
	- when the stored energy is retained within the		N/A
	circuit-breaker, a device is provided which		
	indicates when the storing mechanism is fully		
	charged.		
	- means for charging the operating mechanism and		N/A
	closing control components operates when		1 17 1
	auxiliary supply voltage is between 85% and 110%		
	of the rated control supply voltage.		
	- not possible for the moving contacts to move from		N/A
	the open position, unless the charge is sufficient for		
	satisfactory completion of the closing operation.		
	- by manually operated circuit-breaker is the		N/A
	direction of operation indicated. (not for		1
	circuit-breaker with an independent manual closing		
	operation.)		
	- For trip free circuit-breaker it shall not be possible		N/A
	to maintain the contacts in the touching or closed		
	position when the release is in the position to trip		
	the circuit-breaker.		
7.2.1.2	Opening		-

	EN 60947-2		
Clause	Requirement - Test	Result - Remark	Verdict
7.2.1.2.1	Circuit-breakers which open automatically shall be		-
	trip-free and, unless otherwise agreed between		
	manufacturer and user, shall have their energy for		
	the tripping operation stored prior to the completion		
	of the closing operation		
7.2.1.2.2	Opening by undervoltage releases		-
7.2.1.3.	Operating voltage		-
a part 1			
	An under-voltage relay or release, when		N/A
	associated with a switching device, shall operate to		
	open the equipment even on a slowly falling		
	voltage within the range between 70% and 35% of		
	its rated voltage		
	An under-voltage relay or release shall prevent the		N/A
	closing of the equipment when the supply voltage		
	is below 35% of the rated voltage of the relay or		
	release; it shall permit closing of the equipment at		
	supply voltages equal to or above 85% of its rated		
	value		
	Unless otherwise stated in the relevant product		N/A
	standard, the upper limit of the supply voltage shall		
	be 110% of its rated value		
		T	
7.2.1.3.	Operating time		-
b part 1			
	For a time-delay under-voltage relay or release, the		N/A
	time-lag shall be measured from the instant when		
	the voltage reaches the operating value until the		
	instant when the relay or release actuates the		
	tripping device of the equipment		
7.2.1.2.3	Opening by shunt releases		N/A
7.2.1.4	Limits of operation of shunt releases		<u>-</u>
part 1			_
	A shunt release for opening shall cause tripping		N/A
	under all operating conditions of an equipment		
	when the supply voltage of the shunt release		
	measured during the tripping operation remains		
	between 70% and 110% of the rated control supply		
	voltage and, if a.c., at the rated frequency		
7.2.1.5	Limits of operation of current operated relays and		_
part 1	released		<u>-</u>
	Limits of operation of current operated relays and		N/A

	EN 60947-2		
Clause	Requirement - Test	Result - Remark	Verdict
	releases shall be stated in the relevant product		
	standard		
7.2.1.2.4	Opening by over-current releases		-
a)	Opening under short-circuit conditions		-
	The short-circuit release shall cause tripping of the		Р
	circuit-breaker with an accuracy of 20% of the		
	tripping current value of the current setting for all		
	values of the current setting of the short-circuit		
	current release		
	Where necessary for over-current co-ordination the		N/A
	manufacturer shall provide information (usually		
	curves) showing		
	- maximum cut-off (let-through) peak current as a		N/A
	function of prospective current (r.m.s. symmetrical)		
	-l2t characteristics for circuit-breakers of utilization		N/A
	category A and, if applicable, B for circuit-breakers		
	with instantaneous override (see note to 8.3.5)		
b)	Opening under overload conditions		-
1)	Instantaneous or definite time-delay operation		N/A
	The release shall cause tripping of the		N/A
	circuit-breaker with an accuracy of + 10% of the		
	tripping current value of the current setting for all		
	values of current setting of the overload release		
2)	Inverse time-delay operation		-
	At the reference temperature and at 1,05 times the		Р
	current setting with the conventional non-tripping		
	current, the opening release being energized on all		
	poles, tripping shall not occur in less than the		
	conventional time from the cold state, i.e. with the		
	circuit-breaker at the reference temperature		
	Moreover, when at the end of the conventional time		Р
	the value of current is immediately raised to 1,30		
	times the current setting, i.e. with the conventional		
	tripping current, tripping shall then occur in less		
	than the conventional time later		
	If a release is declared by the manufacturer as		N/A
	substantially independent of ambient temperature,		
	the current values of table 6 shall apply within the		
	temperature band declared by the manufacturer,		
	within a tolerance of 0,3%/K		
	The width of the temperature band shall be at least		N/A
	10 K on either side of the reference temperature		

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
7.2.4.2	Operational performance capability		-
7.2.4.2	The operational performance off-load for which the		Р
part 1	tests are made with the control circuits energized		
	and the main circuit not energized, in order to		
	demonstrate that the equipment meets the		
	operating conditions specified at the upper and		
	lower limits of supply voltage and/or pressure		
	specified for the control circuit during closing and		
	opening operations		
	The operational performance on-load during which		Р
	the equipment shall make and break the specified		
	current corresponding, where relevant, to its		
	utilization category for the number of operations		
	stated in the relevant product standard		
		T

	the other parts connected together.		
	No unintentional disruptive discharge during the		
	tests		Р
8.3.3.2	For circuit-breaker suitable for isolation, the	L1: ≤ 0,1 mA	Р
	leakage current shall be measured through each	L2: ≤ 0,1 mA	
	pole with the contacts in the open position, at a test	L3: ≤ 0,1 mA	
	voltage of 1,1 Ue, and shall not exceed 0,5mA.		
		T	<u> </u>
8.3.3.3	Mechanical operation and operational performance capability		-
8.3.3.3.2	Construction and mechanical operation		_
a)	Construction		_
,	A withdrawable circuit-breaker shall be checked for		N/A
	the requirements stated in 7.1.1		
	A circuit-breaker with stored energy operation shall		N/A
	be checked for compliance with 7.2.1.1.5,		
	regarding the charge indicator and the direction of		
	operation of manual energy storing		
b)	Mechanical operation		-
	A circuit-breaker with dependent power operation		N/A
	shall comply with the requirements stated in		
	7.2.1.1.3		
	A circuit-breaker with dependent power operation		N/A
	shall operate with the operating mechanism		
	charged to the minimum and maximum limits		
	stated by the manufacturer		
	A circuit-breaker with stored energy operation shall		N/A
	comply with the requirements stated in 7.2.1.5 with		
	the auxiliary supply voltage at 85% and 110% of		
	the rated control supply voltage.		
	It shall also be verified that the moving contacts		N/A
	cannot be moved from the open position when the		
	operating mechanism is charged to slightly below		
	the full charge as evidenced by the indicating		
	device		
	For a trip-free circuit-breaker it shall not be possible		N/A
	to maintain the contacts in the touching or closed		
	position when the tripping release is in the position		
	to trip the circuit-breaker		
	If the closing and opening times of a circuit-breaker		N/A
	are stated by the manufacturer, such times shall		

	EN 60947-2		
Clause	Requirement - Test	Result - Remark	Verdict
	comply with the stated values		
c)	Undervoltage releases		
,	Undervoltage releases shall comply with the		N/A
	requirements of 7.2.1.3 of Part 1. For this purpose,		
	the release shall be fitted to a circuit-breaker		
	having the maximum current rating for which the		
	release is suitable		
i)	Drop out voltage		
	It shall be verified that the release operates to open		N/A
	the circuit-breaker between the voltage limits		
	specified		
	The voltage shall be reduced from rated voltage at		N/A
	a rate to reach 0 V in approximately 30 s		
	The test for the lower limit is made without current		N/A
	in the main circuit and without previous heating of		
	the release coil		
	In the case of a release with a range of rated		N/A
	voltages, this test applies to the maximum voltage		
	of the range		
	The test for the upper limit is made starting from a		N/A
	constant temperature corresponding to the		
	application of rated control supply voltage to the		
	release and rated current in the main poles of the		
	circuit-breaker		
	This test may be combined with the		N/A
	temperature-rise test of 8.3.3.6		
	In the case of a release with a range of rated		N/A
	voltages, this test is made at both the minimum and		
	maximum rated control supply voltages		
		Γ	T
ii)	Test for limits of operation		
	Starting with the circuit-breaker open, at the		N/A
	temperature of the test room, and with the supply		
	voltage at 30% rated maximum control supply		
	voltage, it shall be verified that the circuit-breaker		
	cannot be closed by the operation of the actuator		
	When the supply voltage is raised to 85% of the		N/A
	minimum control supply voltage, it shall be verified		
	that the circuit-breaker can be closed by the		
	operation of the actuator		
iii)	Performance under overvoltage conditions		-

Page 32 of 85

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
	With the circuit-breaker closed and without current		N/A
	in the main circuit, it shall be verified that the		
	undervoltage release will withstand the application		
	of 110% rated control supply voltage for 4 h without		
	impairing its functions		
d)	Shunt releases		-
	Shunt releases shall comply with the requirements		N/A
	of 7.2.1.4 of Part 1. For this purpose, the release		
	shall be fitted to a circuit-breaker having the		
	maximum rated current for which the release is		
	suitable		
	It shall be verified that the release will operate to		N/A
	open the circuit-breaker at 70% rated control		
	supply voltage when tested at an ambient		
	temperature of + 55 °C + 2 °C without current in the		
	main poles of the circuit-breaker		
	In the case of a release having a range of rated		N/A
	control supply voltages, the test voltage shall be		
	70% of the minimum rated control supply voltage

8.3.3.3.2	Construction and mechanical operation		-
a)	Construction		-
	A withdrawable circuit-breaker shall be checked for		N/A
	the requirements stated in 7.1.1		
	A circuit-breaker with stored energy operation shall		N/A
	be checked for compliance with 7.2.1.1.5,		
	regarding the charge indicator and the direction of		
	operation of manual energy storing		
b)	Mechanical operation		-
,	A circuit-breaker with dependent power operation		N/A
	shall comply with the requirements stated in		
	7.2.1.1.3		
	A circuit-breaker with dependent power operation		N/A
	shall operate with the operating mechanism		
	charged to the minimum and maximum limits		

EN 60947-2			
Clause	Requirement - Test	Result - Remark	Verdict
	A circuit-breaker with stored energy operation shall		N/A
	comply with the requirements stated in 7.2.1.5 with		
	the auxiliary supply voltage at 85% and 110% of		
	the rated control supply voltage.		
	It shall also be verified that the moving contacts		N/A
	cannot be moved from the open position when the		
	operating mechanism is charged to slightly below		
	the full charge as evidenced by the indicating		
	device		
	For a trip-free circuit-breaker it shall not be possible		N/A
	to maintain the contacts in the touching or closed		
	position when the tripping release is in the position		
	to trip the circuit-breaker		
	If the closing and opening times of a circuit-breaker		N/A
	are stated by the manufacturer, such times shall		
	comply with the stated values		
c)	Undervoltage releases		-
	Undervoltage releases shall comply with the		N/A
	requirements of 7.2.1.3 of Part 1. For this purpose,		
	the release shall be fitted to a circuit-breaker		
	having the maximum current rating for which the		
	release is suitable		
i)	Drop out voltage		
	It shall be verified that the release operates to open		N/A
	the circuit-breaker between the voltage limits		
	specified		
	The voltage shall be reduced from rated voltage at		N/A
	a rate to reach 0 V in approximately 30 s		
	The test for the lower limit is made without current		N/A
	in the main circuit and without previous heating of		
	the release coil		
	In the case of a release with a range of rated		N/A
	voltages, this test applies to the maximum voltage		
	of the range		
	The test for the upper limit is made starting from a		N/A
	constant temperature corresponding to the		
	application of rated control supply voltage to the		
	release and rated current in the main poles of the		
	circuit-breaker		
	This test may be combined with the		N/A
	temperature-rise test of 8.3.3.6		
	In the case of a release with a range of rated		N/A

	EN 60947-2		
Clause	Requirement - Test	Result - Remark	Verdict
	voltages, this test is made at both the minimum and		
	maximum rated control supply voltages		
ii)	Test for limits of operation		
<u> </u>	Starting with the circuit-breaker open, at the		N/A
	temperature of the test room, and with the supply		
	voltage at 30% rated maximum control supply		
	voltage, it shall be verified that the circuit-breaker		
	cannot be closed by the operation of the actuator		
	When the supply voltage is raised to 85% of the		N/A
	minimum control supply voltage, it shall be verified		
	that the circuit-breaker can be closed by the		
	operation of the actuator		
iii)	Performance under overvoltage conditions		
	With the circuit-breaker closed and without current		N/A
	in the main circuit, it shall be verified that the		
	undervoltage release will withstand the application		
	of 110% rated control supply voltage for 4 h without		
	impairing its functions		
d)	Shunt releases		-
	Shunt releases shall comply with the requirements		N/A
	of 7.2.1.4 of Part 1. For this purpose, the release		
	shall be fitted to a circuit-breaker having the		
	maximum rated current for which the release is		
	suitable		
	It shall be verified that the release will operate to		N/A
	open the circuit-breaker at 70% rated control		
	supply voltage when tested at an ambient		
	temperature of + 55 °C + 2 °C without current in the		
	main poles of the circuit-breaker		
	In the case of a release having a range of rated		N/A
	control supply voltages, the test voltage shall be		
	70% of the minimum rated control supply voltage
