

PI150 Series Frequency Inverter

English Manual

www.powtran.com

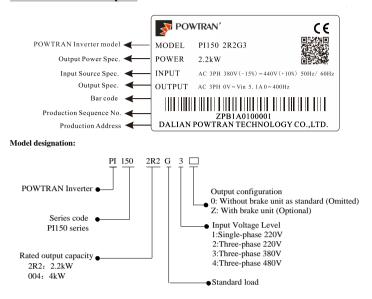

1.Foreword

Thank you for choosing Powtran PI150 series fundamental form frequency inverter.

The diagrams of these operating instructions are used for convenience of explanation and may be slightly different from the product due to product upgrades. Please refer to the actual product. Please take this manual to the end user and keep it for future maintenance use. If you have any questions, please get in touch with our company or our agent in time, we will offer dedicated environments.

dedicated service to you.

4.Operation keyboard introduction

Figure 4-1:Operation panel display

4.1 Keyboard indicator

Ind	licator light	Name
	RUN	Running indicator light * ON: The inverter is working * OFF: The inverter stops
Status light	FWD/REV	Forward/reverse running light * ON: In forward status * OFF: In reversal status
	Hz	Frequency indicator
	А	Current indicator

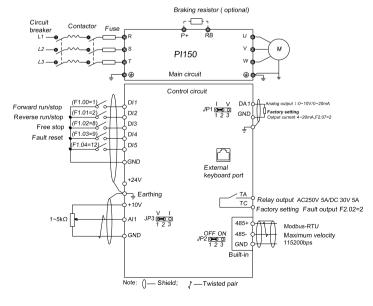

4.2 Operation p	anel button descript	ion
Sign	Name	Function
PRG	Parameter setting/esc key	 * Enter into the modified status of main menu; * Esc from functional parameter modification; * Esc submenu or functional menu to status menu
>> SHIFT	Shift Key	*Choose displayed parameter circularly under running or stop interface; choose parameter's modified position when modify parameter
	Increasing key	* Parameter or function number increasing
	Decreasing key	* Parameter or function number decreasing
RUN	Running key	* For starting running in the mode of keyboard control status
STOP RST	Stop/Reset key	* For stopping running in the running status; for resetting the operation in fault alarm status. The function of the key is subject to F6.00
ENTER	Enter key	* Step by step into the menu screen, set parameters to confirm.
QUICK	Quick multi-function key	* This key function is determined by the function code F6.21

	Jogging control	Jog frequency range: 0.00Hz to m 0.0~6500.0s.	ax. frequency; jog Ac/deceleration time:				
	Built-in PID	Easy to realize closed-loop contro	l system for the process control.				
	Automatic voltage regulation(AVR)	Automatically maintain a constant electricity grid changes.	output voltage when the voltage of				

	I	tems		Specifications
			king method	Automatically track current motor speed when the inverter starts
lization tion	Self-inspection of peripherals after power-on			After powering on, peripheral equipment will perform safety testing, such as ground, short circuit, etc.
Environment Commu Display Protection Running Renordization Forection Environment Commu Display function function Commu Display function C	Quick current limiting			The current limiting algorithm is used to reduce the inverter over current probability, and improve whole unit anti-interference capability.
H	Timir	<u> </u>		Timing control function: Time setting range(0m~6500m)
		terminai		5 digital input terminals
	_	AI1	analog input	1 analog AI1 input terminal, select 0~10V or 0~20mA input
	Input Signal	Multi-speed		At most 16-speed can be set(Run by using the multi-function terminals or program)
	put	Eme	rgency stop	Interrupt controller output
	Ц	Faul	t reset	When the protection function is active, you can automatically or manually reset the fault condition.
50		PID signa	feedback al	Including DC(0~10V), DC(0~20mA)
uin.	I	Outp	out terminal	1 way relay output terminal; 1 way DA1 analog output terminal
Rur	t Signal	Rela	y output	There are 40 kinds of signals to choose from each way. Contact capacity of the relay: Normally open contact 5A/AC 250V; 5A/DC 30V
	Output	DA1 analog output		1 way analog output, you can select 16 kinds of signals such as frequency, current, voltage, etc. The output signal range can be set arbitrarily within 0~10V/0~20mA.
	Running command channel		ommand	Three channels: Operation panel, control terminals and serial communication port. They can be switched through a variety of ways.
	Frequency source			Total 7 frequency sources: Digital, analog voltage, multi-speed, and serial port.
	Run function		on	Limit frequency, jump frequency, frequency compensation, auto-tuning, PID control
Protection function	Inver	ter pr	otection	Overvoltage protection, undervoltage protection, overcurrent protection, overload protection, overheat protection, overcurrent stall protection, overvoltage stall protection, losting-phase protection (Optional), communication error, PID feedback signal abnormalities, and short circuit to ground protection.
Ŋ		LED display		Monitoring objects including: Running frequency, set frequency, bus voltage, output voltage, output current, output power, output torque, input terminal status, output terminal status, analog AII value, motor Actual running speed, PID set value percentage, PID feedback value percentage.
Displa	keybo	Jaru	Error information	At most save three error message, and the time, type, voltage, current, frequency and work status can be queried when the failure is occurred.
	Key l select	y lock and function		Lock part or all of keys, define the function scope of some keys to prevent misuse.
	IGBT	`temp	berature	Display current IGBT temperature inside the inverter.
Commu nication	RS48	5		Built-in 485
	Envir tempe			-10~40 $^\circ \rm C$ (The environment temperature in 40~50 $^\circ \rm C$, please derating use)
	Stora	ge ter	nperature	-20~65 °C
Jent			ent humidity	Less than 90% R.H, no condensation.
uuo.	Vibra	tion		Below 5.9m/s ² (= 0.6g)
Envir	Appli	catio	n sites	Indoor where no sunlight or corrosive, explosive gas and water vapor, dust, flammable gas, oil mist, water vapor, drip or salt, etc.
	Altitu	ıde		Use below 1000m without derating, 1% for each 100m increasing above 1000m, the highest altitude is 3000m
	Prote			IP20
fluct flard	Produ stand		opts safety	IEC61800-5-1:2007
Product standard	Produ stand		opts EMC	IEC61800-3:2005
Cooling				Forced air cooling
Installat	tion m	ethod		Rail mounting, wall mounting

6.Wiring diagram

Notes in main circuit wiring

(1).Wiring specifications, please implement wiring in accordance with electrical regulations;
 (2).Do not connect AC to the output of frequency converter (U, V, W), otherwise the frequency inverter

will be damaged; (3).Power supply wiring, please try to use isolation line and pipeline, and the isolation line or pipeline ends

grounded; (4). Frequency inverter grounding wire can not be grounded together with welding machine, high-power motor or high current load, please grounding alone;

(5). Grounding $\stackrel{\textcircled{}}{\oplus}$ please grounding correctly, grounding resistor less than 10 $\Omega.$ Notes in wiring control circuit

(1).Please separate the control signal line from the main circuit line and other power lines;(2).To prevent misoperation caused by interference, use twisted or double shielded wires, specification 0.5~2mm ²

(3).Make sure the permissible conditions of each terminal, such as power supply, maximum permissible current, etc;

(4). The terminal wiring requirements, correct selection of accessories, such as: Voltmeter, input power supply, etc:

(5).After completing the wiring, please check it correctly and make sure that it is correct before powering it on

7. Parameter list

In PI150 series frequency inverters ,some parameters are "manufacturer reserved", and their serial numbers are not listed in the function parameter table, which leads to the discontinuity of some parameter serial numbers in the table. For the parameters not introduced in the manual, please do not attempt to modify them to avoid causing errors.

7.1	7.1. d0 group Monitoring function group						
Code	Parameter name	Functional Description	Factory setting				
d0.00	Running frequency	Inverter theoretical operating frequency	0.01Hz				
d0.01	Set frequency	Actual set frequency	0.01Hz				
d0.02	DC bus voltage	Detected value for DC bus voltage	0.1V				
d0.03	Output voltage	Actual output voltage	1V				
d0.04	Output current	Effective value for Actual motor current	0.01A

Setting value	Functions		Description				
0	No output		ut action				
1	Inverter running		is in running state, the output frequent	cy (Can be	_		
2	Fault output (Fault down)		e output ON signal. te drive fails and downtime, the output	ON signal.			
3	Frequency level detection FDT1 output		efer to the function code F7.23, F7.24				
4	Frequency arrival		efer to the description of function code				
5	Zero-speed running (No output when shutdown)	Inverter operation and the output frequency is 0, output ON signal. When the drive is shut down, the signal is OFF.			N		
6	Motor overload pre-alarm	Before the motor overload protection, according to the overload pre-alarm threshold value judgment, more than the pre-alarm threshold value output ON signal. Motor overload parameter settings refer to the function code F8.02~F8.04.					
7	Inverter overload pre- alarm	Setup co	he inverter overload occurs 10s, outpu punter arrive.	, i			
8	Setup counter arrive	signal. S	e count reaches the set value of E0.08 pecifies the count value reaches.				
9	Specifies the count value reaches		e count reaches the set value of E0.09 Counting Function Reference E0 group		1		
10	Length arrival	When th	e actual length of the detection of mor h, output ON signal.)5		
11	PLC cycle is complete	After sir	nple PLC completes one cycle, the our 250ms signal.	tput of a pu	lse		
12	Total running time arrival		total running time of more than F7.21 output ON signal.	F6.07 set			
13	Limited in frequency	lower fr	e set frequency exceeds the upper lim equency, and output frequency is beyo quency or lower limit frequency, output	nd the uppe	er		
14	Torque limiting	Drive under the speed control mode, when the output torque reaches the torque limit, the inverter is stall protection status, while the output ON signal.					
15	Ready to run	When the inverter main circuit and control circuit power supply has stabilized, and the drive does not detect any fault information, the drive is in an operational state, output ON signal.					
17	Upper frequency arrival	frequenc	e operating frequency reaches the upp cy,output ON signal.				
18	The lower frequency arrival (No output when shutdown)	output C	e operating frequency reaches the low N signal. The next stop status signal i	s OFF.			
19	Under voltage state output	When th signal.	e inverter is in an undervoltage condit	ion, output	ON		
20	Communication setting		the communication protocol.				
23	Zero-speed operation 2 (Shutdow also output)	signal is	erter"s output frequency is 0, output O also ON when shutdown.	•			
24	Cumulative power-on time arriva		e inverter's accumulated power on time e set time, the output ON signal.	ie (F6.08) o	ver		
25	Frequency level detection FDT2 output		efer to the function code F7.26, F7.27				
26 27	Frequency 1 reaches output Frequency 2 reaches output		efer to the function code F7.28, F7.29's efer to the function code F7.30, F7.31's				
28	Current 1 reaches output		efer to the function code F7.36, F7.37				
29	Current 2 reaches output		efer to the function code F7.38, F7.39				
30	Timing reach output		the timer function selection (F7.42) is very reach this run after the set time runs out				
31	AI1 input overrun	When th input pro	e value of analog input AI1 greater that otection limit) or less than F7.50 (AI1 on under), output ON signal.		J1		
33	Off load	When th	e inverter is off-load state, output ON	signal.			
34	Reverse operation		in reverse run, output ON signal				
35	0 current state		the description of function code F7.32 module heatsink temperature (F6.06)		et .		
36	Module temperature reaches	module	temperature reaches value (F7.40), out	tput signal (ON.		
37	Software current limit		efer to the function code F7.34, F7.35		ns.		
38	The lower frequency arrival (Stop and output)		te operating frequency reaches the low cy, output ON signal. In shutdown state DN.		nal		
40	Current running time of arrival		e inverter starts running time is longer 7.45, it outputs ON signal.	than the ti	me		
F2.07	DA1 output function selection	0~17		2	☆		
	alog Output DA output range is 0V- ship in the following table	~10V, or 0m/	A~20mA, with the corresponding scali	ng function	1		
	Setting Functions Description						

value	Functions	Description
0	Running frequency	0~max. output frequency
1	Set frequency	0~max. output frequency
2	Output current	0~2 times the motor rated current

3	Output torque	0~2 times the motor rated toqure			
4	Output power	0~2 times rated power			
5	Output voltage	0~1.2 times inverter rated voltage			
7	Anolog AI1	0V~10V(Or 0~20mA)	0V~10V(Or 0~20mA)		
10	Lentgh value	0~max. setting length	0~max. setting length		
11	The count value 0~max. count value				
12	Coummunication set	unication set 0.0%~100.0%			
13	Motor speed	0~max. output frequency correspondent speed			
14	Output current 0.0A~100.0A(Inverter power≤55kW); 0.0A~1000.0A(Inverter power>55kW)				
15	DC bus voltage	0.0V~1000.0V			
17	Frequency source main set	0~max. output frequency			
F2.11	Relay 1 output delay time	0.0s~3600.0s	0.0s	☆

8. Fault alarm and countermeasures

PI150 can provide effective protection when the equipment performance is played fully. In case of abnormal fault, the protection function will be invoked, the inverter will stop output, and the faulty relay contact of the inverter will start, and the fault code will be displayed on the display panel of the inverter. Before consulting the service department, user can perform self-check, analyze the fault cause and find out the solution according to the instructions of this chapter. If the fault is caused by the reasons as described in the dotted frame, please consult the agents of inverter or directly contact with our company.

No	Fault ID	Failure type	Possible causes	Solutions
1	Err.01	Inverter unit protection	I. The short circuit of inverter output happens Z. The wiring for the motor and the inverter is too long 3.Module overheating 4. The internal wiring of inverter is loose 5. The main control panel is abnormal 6. The drive panel is abnormal. 7. The inverter module is abnormal	1.Eliminate peripheral faults 2.Additionally install the reactor or the output filter 3.Check the air duct is blocked or not and the fan is working normally or not, and eliminate problems 4.Correctly plug all cables 5.Seek for technical support
2	Err.02	Acceleration overcurrent	I.The acceleration time is too short 2.Manual torque boost or V/F curve is not suitable 3.The voltage is low 4.The short-circuit or earthing of inverter output happens 5.The control mode is vector and without identification of parameters	I.Increase acceleration time 2.Adjust manual torque boost or V/F curve 3.Set the voltage to the normal range 4.Eliminate peripheral faults 5.Perform identification for the motor parameters 6.Select Speed Tracking Start or

			6 The motor that is not a	and at all a standards
			6. The motor that is rotating is started unexpectedly.7. Suddenly increase the load in the process of acceleration.	restart after stopping the motor. 7.Cancel the sudden load 8.Choose the inverter with large power level
			8. The type selection of inverter is small 1. The short-circuit or earthing of inverter output happens	1.Eliminate peripheral faults 2.Perform identification for the
3	Err.03	Deceleration	2. The control mode is vector and without identification of parameters 3. The deceleration time is too short 4. The voltage is low	motor parameters 3.Increase the deceleration time 4.Set the voltage to the normal
			5.Suddenly increase the load in the process of deceleration. 6.didn't install braking unit and braking resistor	range 5.Cancel the sudden load 6.Install braking unit and brake resistor
4	Err.04	Constant speed	 The short-circuit or earthing of inverter output happens The control mode is vector and without identification of parameters 	1.Eliminate peripheral faults 2.Perform identification for the motor parameters 3.Set the voltage to the normal range
		overcurrent	3.The voltage is low4, Whether suddenly increase the load when running5.The type selection of inverter is small	4.Cancel the sudden load 5.Choose the inverter with large power level
5	Err.05	Acceleration overvoltage	 Didn't install braking unit and braking resistor The input voltage is high There is external force to drag the motor to run when accelerating. The acceleration time is too short 	 Install braking unit and brake resistor Set the voltage to the normal range Cancel the external force or install braking resistor. Increase acceleration time
6	Err.06	Deceleration overvoltage	1. The input voltage is high 2. There is external force to drag the motor to run when decelerating. 3. The deceleration time is too short 4. Didn't install braking unit and braking resistor	 Set the voltage to the normal range Cancel the external force or install braking resistor. Increase the deceleration time Install braking unit and brake resistor
7	Err.07	Constant speed overvoltage	1. There is external force to drag the motor to run when running 2. The input voltage is high	 Cancel the external force or install braking resistor. Set the voltage to the normal range
8	Err.08	Control power failure	The range of input voltage is not within the specification	Adjust the voltage to the range of the requirements of specification
9	Err.09	Under voltage fault	1. The momentary power cut 2. The inverter's input voltage is not within the specification 3. The bus voltage is not normal 4. The rectifier bridge and buffer resistance are abnormal 5. The drive panel is abnormal 6. The control panel is abnormal	1.Reset fault 2.Adjust the voltage to the normal range 3.Seek for technical support
10	Err.10	Inverter overload	1. The type selection of inverter is small 2. Whether the load is too large or the motor stall occurs	1.Choose the inverter with large power level 2.Reduce the load and check the motor and its mechanical conditions
11	Err.11	Motor Overload	1. Power grid voltage is too low 2.Whether the setting motor protection parameters (F8.03) is appropriate or not 3.Whether the load is too large or the motor stall occurs	 Check the power grid voltage Correctly set this parameter. Reduce the load and check the motor and its mechanical conditions
13	Err.13	Output phase loss	 The lead wires from the inverter to the motor is not normal The inverter's three phase output is unbalanced when the motor is running The drive panel is abnormal. The module is abnormal 	1.Eliminate peripheral faults 2.Check the motor's three-phase winding is normal or not and eliminate faults 3.Seek for technical support
14	Err.14	Module overheating	 The air duct is blocked The fan is damaged The ambient temperature is too high The module thermistor is damaged The inverter module is damaged 	 Clean up the air duct Replace the fan Decrease the ambient temperature Areplace the thermistor Replace the inverter module
15	Err.15	External equipment fault	Input external fault signal through the multi-function terminal DI	Reset run
16	Err.16	Communication fault	1. The communication cable is not normal 2. The settings for communication expansion card F9.07 are incorrect 3. The settings for communication parameters F9 group are incorrect 4. The host computer is not working	1.Check the communication cable 2.Correctly set the communications expansion card type 3.Correctly set the communication parameters 4.Check the wiring of host computer
17	Err.17	Contactor fault	properly 1.Input phase loss 2.The drive plate and the contact are not normal	1.Check and eliminate the existing problems in the peripheral line 2.replace the drive, the power board or contactor
18	Err.18	Current detection fault	1.Check Hall device 2.The drive panel is abnormal.	1.Replace the drive panel 2.Replace hall device
19	Err.19	Motor parameter auto tuning fault	1. The motor parameters was not set according to the nameplate 2. The identification process of parameter is timeout	1.Correctly set motor parameter according to the nameplate 2.Check the lead wire from the inverter to the motor
21	Err.21	EEPROM read and write fault	EEPROM chip is damaged	Replace the main control panel
22	Err.22	Inverter hardware fault	1.Overvoltage 2.Overcurrent	1.Eliminate overvoltage fault 2.Eliminate overcurrent fault
23	Err.23	Short-circuit to ground fault Cumulative	Motor short to ground	Replace the cable or motor Clear history information by using
26	Err.26	running time arrival fault	Cumulative running time arrival fault Input custom fault 1 signal through the	initialization function parameters
27	Err.27	Custom fault 1	multi-function terminal DI Input custom fault 2 signal through the	Reset run
28	Err.28	Custom fault 2 Total power-on	multi-function terminal DI	Reset run
29 31	Err.29 Err.31	time arrival fault PID feedback	Total power-on time reaches the set value PID feedback is less than the set value	Clear history information by using initialization function parameters Check PID feedback signal or set
51	L11.31	I ID ICCUDACK	The recuback is less than the set value	CIRCER I ID ICCUDACE SIGNAL OF SEL

		loss when running fault	of E2.11	E2.11 to an appropriate value
40	Err.40	Quick current limiting fault	 Whether the load is too large or the motor stall occurs The type selection of inverter is small 	1.Reduce the load and check the motor and its mechanical conditions 2.Choose the inverter with large power level
42	Err.42	Too large speed deviation fault	 The setting for Too Large Speed Deviation parameters(F8.15, F8.16) is unreasonable. The setting for encoder parameters is incorrect; The parameter was not identified 	1.Reasonably set the detection parameters 2.Correctly set encoder parameters 3.Perform identification for the motor parameters
51	Err.51	Initial position error	The deviation between the motor parameters and the actual parameters is too large	Reconfirm the correct motor parameters, focus on whether the rated current is set to too small.
-	COF	Communicatio n failure	 Keyboard interface control board interface; Keyboard or crystal connector; Control board or keyboard hardware damage; Keyboard line is too long, causing the interference. 	 Detection of keyboard interface, control board interface is abnorma. Detect keyboard, crystal joints are abnormal. Replace control board or keyboard. Consult factory, seek help.

Powtran technology A manufacturer of motor control intelligent products and devices based on motor design.
